## The Obsidian

Music is one of the most prominent forms of art. It evokes emotion and inspiration within each and every one of us. The Obsidian allows us to enjoy the expression of sound with more than just our ears. A piece of modern, sculptural art to behold, the Obsidian is a collision between art and sound. Inspired by the smooth facets of the Obsidian crystal, the speaker is inspired by the forms that nature offers us.

Like any creation of it, it is both organic and structured. It is an architecture that asks to be seen, touched, listened to ... it appeals to our senses, in all awareness.

Obsidian combines the magic of an object that would be drawn in homage to the power of nature, reinvented by the hand of man, with the abstraction of an ageless artifact, without identification or possible reference, out of space and time; like music we would have left the imprint of a beating heart, a breath, a vibration, life.

Because the effect of music on the mind opens a door in itself, transports us to an elsewhere without physical or temporal borders. Escape or intense concentration, the multiplicity of feelings and emotions is reflected through the design, all in contrasts of shapes and yet in balance, as were the sculptures of the great Constantin Brancusi. It is a Totem object that opens our minds, offers an abundance of emotional journeys.
